Crop Physiology: Applications for Genetic Improvement and Agronomy

Victor O. Sadras, Daniel Calderini

Crop Physiology: Applications for Genetic Improvement and Agronomy Victor O. Sadras, Daniel Calderini

Never before has a holistic approach to sustainable agriculture and plant physiology been presented in one source.

This book compiles a multi-authored and international perspective on the ways in which crop physiology could be integrated with other disciplines. With a focus on genetic improvement and agronomy, this book addresses the challenges of environmentally sound production of bulk and quality food, fodder, fiber and energy, which are of ongoing international concern.

- * Provides a view of crop physiology as an active source of methods, theories, ideas and tools for application in genetic improvement and agronomy
- * Written by leading scientists from around the world with publication records of demonstrable influence and impact
- * Combines environment-specific cropping systems and general principles of crop science to appeal to advanced students and scientists in agriculture-related disciplines, from molecular sciences to natural resources management
