Developing Students' Statistical Reasoning

Joan Garfield, Dani Ben-Zvi

Developing Students' Statistical Reasoning Joan Garfield, Dani Ben-Zvi

Increased attention is being paid to the need for statistically educated citizens: statistics is now included in the K-12 mathematics curriculum, increasing numbers of students are taking courses in high school, and introductory statistics courses are required in college. However, increasing the amount of instruction is not sufficient to prepare statistically literate citizens. A major change is needed in how statistics is taught. To bring about this change, three dimensions of teacher knowledge need to be addressed: their knowledge of statistical content, their pedagogical knowledge, and their statistical-pedagogical knowledge, i.e., their specific knowledge about how to teach statistics. This book is written for mathematics and statistics educators and researchers. It summarizes the research and highlights the important concepts for teachers to emphasize, and shows the interrelationships among concepts. It makes specific suggestions regarding how to build classroom activities, integrate technological tools, and assess students' learning. This is a unique book. While providing a wealth of examples through lessons and data sets, it is also the best attempt by members of our profession to integrate suggestions from research findings with statistics concepts and pedagogy. The book's message about the importance of listening to research is loud and clear, as is its message about alternative ways of teaching statistics. This book will impact instructors, giving them pause to consider: 'Is what I'm doing now really the best thing for my students? What could I do better?' J. Michael Shaughnessy, Professor, Dept of Mathematical Sciences, Portland State University, USA This is a much-needed text for linking research and practice in teaching statistics. The authors have provided a comprehensive overview of the current state-of-the-art in statistics education research. The insights they have gleaned from the literature should be tremendously helpful for those involved in teaching and researching introductory courses. Randall E. Groth, Assistant Professor of Mathematics Education, Salisbury University, USA

From reader reviews:

Nora Carter:

Here thing why this specific Developing Students' Statistical Reasoning are different and trustworthy to be yours. First of all examining a book is good however it depends in the content than it which is the content is as scrumptious as food or not. Developing Students' Statistical Reasoning giving you information deeper including different ways, you can find any guide out there but there is no guide that similar with Developing Students' Statistical Reasoning. It gives you thrill examining journey, its open up your own eyes about the thing that happened in the world which is maybe can be happened around you. You can bring everywhere like in park, café, or even in your means home by train. If you are having difficulties in bringing the printed book maybe the form of Developing Students' Statistical Reasoning in e-book can be your substitute.

Thomas Jones:

Developing Students' Statistical Reasoning can be one of your beginner books that are good idea. All of us recommend that straight away because this guide has good vocabulary that will increase your knowledge in language, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort to put every word into satisfaction arrangement in writing Developing Students' Statistical Reasoning however doesn't forget the main point, giving the reader the hottest as well as based confirm resource facts that maybe you can be one of it. This great information can certainly drawn you into completely new stage of crucial considering.

Patricia Mattox:

Your reading 6th sense will not betray you actually, why because this Developing Students' Statistical Reasoning guide written by well-known writer whose to say well how to make book which can be understand by anyone who else read the book. Written within good manner for you, leaking every ideas and writing skill only for eliminate your personal hunger then you still doubt Developing Students' Statistical Reasoning as good book but not only by the cover but also by content. This is one book that can break don't determine book by its include, so do you still needing an additional sixth sense to pick this!? Oh come on your reading through sixth sense already said so why you have to listening to a different sixth sense.

Mary Craine:

As a scholar exactly feel bored in order to reading. If their teacher expected them to go to the library or make summary for some guide, they are complained. Just tiny students that has reading's heart and soul or real their pastime. They just do what the instructor want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that reading is not important, boring in addition to can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this age, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Developing Students' Statistical Reasoning can make you sense more interested to read.
