Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics)

James Keener, James Sneyd

Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) James Keener, James Sneyd

There has been a long history of interaction between mathematics and physiology. This book looks in detail at a wide selection of mathematical models in physiology, showing how physiological problems can be formulated and studied mathematically, and how such models give rise to interesting and challenging mathematical questions. With its coverage of many recent models it gives an overview of the field, while many older models are also discussed, to put the modern work in context.

In this second edition the coverage of basic principles has been expanded to include such topics as stochastic differential equations, Markov models and Gibbs free energy, and the selection of models has also been expanded to include some of the basic models of fluid transport, respiration/perfusion, blood diseases, molecular motors, smooth muscle, neuroendocrine cells, the baroreceptor loop, turboglomerular oscillations, blood clotting and the retina.

Owing to this extensive coverage, the second edition is published in two volumes. This first volume deals with the fundamental principles of cell physiology and the second with the physiology of systems.

The book includes detailed illustrations and numerous exercises with selected solutions. The emphasis throughout is on the applications; because of this interdisciplinary approach, this book will be of interest to students and researchers, not only in mathematics, but also in bioengineering, physics, chemistry, biology, statistics and medicine.

James Keener is a Distinguished Professor of Mathematics at the University of Utah.

James Sneyd is the Professor of Applied Mathematics at the University of Auckland, New Zealand. He is best known for his work on the dynamics of intracellular calcium.

Reviews of the first edition:

...probably the best book ever written on the interdisciplinary field of mathematical physiology.

Mathematical Reviews, 2000

In addition to being good reading, excellent pedagogy, and appealing science, the exposition is lucid and clear, and there are many good problem sets to choose from... Highly recommended. Mathematical Biosciences, 1999

Both authors are seasoned experts in the field of mathematical physiology and particularly in the field of excitability, calcium dynamics and spiral waves. It directs students to become not merely skilled technicians in biological research but masters of the science. SIAM, 2004

The first edition was the winner of the prize for The Best Mathematics book of 1998 from the American Association of Publishers.

From reader reviews:

Lisa Haight:

Have you spare time for a day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity for spend your time. Any person spent all their spare time to take a stroll, shopping, or went to the particular Mall. How about open or maybe read a book eligible Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics)? Maybe it is being best activity for you. You realize beside you can spend your time along with your favorite's book, you can more intelligent than before. Do you agree with the opinion or you have additional opinion?

Naomi Taylor:

This Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this publication incredible fresh, you will get details which is getting deeper anyone read a lot of information you will get. This Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) without we comprehend teach the one who looking at it become critical in contemplating and analyzing. Don't become worry Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) can bring whenever you are and not make your handbag space or bookshelves' come to be full because you can have it with your lovely laptop even cell phone. This Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) having good arrangement in word and also layout, so you will not experience uninterested in reading.

James Brown:

Information is provisions for people to get better life, information presently can get by anyone on everywhere. The information can be a understanding or any news even a huge concern. What people must be consider while those information which is within the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you get the unstable resource then you understand it as your main information you will have huge disadvantage for you. All of those possibilities will not happen with you if you take Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) as the daily resource information.

Ira Atwood:

Why? Because this Mathematical Physiology: 8/2 (Interdisciplinary Applied Mathematics) is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will jolt you with the secret that inside. Reading this book beside it was fantastic author who also write the book in such amazing way makes the content inside of easier to understand, entertaining means but still convey the meaning completely. So , it is good for you for not hesitating having this any more or you going to regret it. This excellent book will give you a lot of rewards than the other book get such as help improving your expertise and your critical thinking

means. So , still want to hold off having that book? If I ended up you I will go to the guide store hurriedly.
