New Theories and Predictions on the Ozone Hole and Climate Change

Qing-Bin Lu

New Theories and Predictions on the Ozone Hole and Climate Change Qing-Bin Lu

This monograph reviews the establishment of new theories of the ozone hole and global climate change, two major scientific problems of global concern. It provides a comprehensive overview of the author's work including significant discoveries and pioneering contributions, such as the discovery of extremely effective dissociative electron transfer reactions of chlorofluorocarbons (CFCs) adsorbed on ice surfaces and its implications for atmospheric ozone depletion; the proposal of the cosmic-ray-driven electron-induced-reaction (CRE) theory for the ozone hole; the predictions of 11-year cyclic variations in polar ozone loss and stratospheric cooling; the discovery of the nearly perfect linear correlation between CFCs and global surface temperature; the proposal of the CFC theory for modern global warming; the discovery of greenhouse-gas-specific climate sensitivity and the parameter-free calculation of global surface temperature change caused by CFCs; the prediction of global cooling; and so on.

Unlike conventional atmospheric and climate models, the author's theoretical models were established on robust observed data rather than computer simulations with multiple parameters. The new theories have shown the best agreements with the observed data within 10% uncertainties. This book highlights the scientific understandings of the world-concerned problems from the unique point of view of a physicist who seeks theories with great simplicity and superior predictive capacity.

This book is self-contained and unified in presentation. It may be used as an advanced book by graduate students and even ambitious undergraduates in physics, chemistry, environmental and climate sciences. It is also suitable for non-expert readers and policy makers who wish to have an overview of the sciences behind atmospheric ozone depletion and global climate change.

From reader reviews:

Latrice Miller:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite e-book and reading a publication. Beside you can solve your problem; you can add your knowledge by the book entitled New Theories and Predictions on the Ozone Hole and Climate Change. Try to the actual book New Theories and Predictions on the Ozone Hole and Climate Change as your close friend. It means that it can being your friend when you experience alone and beside associated with course make you smarter than before. Yeah, it is very fortuned for yourself. The book makes you much more confidence because you can know every thing by the book. So, let me make new experience as well as knowledge with this book.

Marvin Murphy:

In this age globalization it is important to someone to acquire information. The information will make professionals understand the condition of the world. The health of the world makes the information easier to share. You can find a lot of referrals to get information example: internet, newspapers, book, and soon. You can observe that now, a lot of publisher this print many kinds of book. Often the book that recommended to you is New Theories and Predictions on the Ozone Hole and Climate Change this publication consist a lot of the information from the condition of this world now. This particular book was represented how can the world has grown up. The dialect styles that writer use to explain it is easy to understand. Typically the writer made some analysis when he makes this book. That is why this book suitable all of you.

Diane Walker:

Is it an individual who having spare time and then spend it whole day by means of watching television programs or just resting on the bed? Do you need something new? This New Theories and Predictions on the Ozone Hole and Climate Change can be the reply, oh how comes? A fresh book you know. You are and so out of date, spending your extra time by reading in this brand-new era is common not a geek activity. So what these books have than the others?

Mathew Holstein:

You can find this New Theories and Predictions on the Ozone Hole and Climate Change by visit the bookstore or Mall. Only viewing or reviewing it might to be your solve problem if you get difficulties for ones knowledge. Kinds of this guide are various. Not only through written or printed but in addition can you enjoy this book by means of e-book. In the modern era like now, you just looking from your mobile phone and searching what your problem. Right now, choose your ways to get more information about your e-book. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose appropriate ways for you.
